

Application Development

We specialize in rapid application development using industry-leading Open Source technologies, such as GNU/Linux, Apache, MySQL, PHP, and Drupal. Our solutions conform to key industry standards, such as XHTML, CSS, iCal, RSS, and SSL. We use and support major GNU/GPL projects, including:

- Drupal: A powerful web application framework. This award-winning system is ideal for complex community sites.
- Joomla: Simple and easy to use, with thousands of freely contributed, ready-to-use extensions, this award-winning content management system is perfect for a site that needs to go live today.
- SMF Forum: A popular and feature-rich forum management system.
- PHPBB: The granddaddy of PHP forum systems, this application is currently seeing increased popular.
- WordPress: Still one of the best blogging systems.
- Gallery2: The preeminent image gallery system.
- SugarCRM: Customer Relationship Management for the rest of us.
- Moodle: The best Open Source Course Management System. Used by thousands of schools and universities throughout the world.
